New, expanded library hours start **Oct. 1**. More hours for story time. More hours for community meetings. More hours to use free computers. Check out the library's new hours at dclibrary.org/newhours.

MEMORANDUM

To: File

From: Ronald Cook

Date: August 27, 2013

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors that have contributed to the increase in the number of people in the world who are under 15 years of age. One of the main factors is the increase in the number of people who are surviving into old age. This is due to a number of factors, including improvements in medical care, better nutrition, and a decline in the number of people who are dying from infectious diseases.

Another factor is the increase in the number of people who are having children. This is due to a number of factors, including a decline in the number of people who are dying from infectious diseases, a decline in the number of people who are having abortions, and a decline in the number of people who are using contraception.

The increase in the number of people in the world who are under 15 years of age has a number of implications. One of the main implications is that it will increase the demand for resources, such as food, water, and shelter. This will put pressure on the environment and on the world's resources.

Another implication is that it will increase the demand for education. This will put pressure on the world's education system and on the world's resources. It will also put pressure on the world's economy, as it will increase the number of people who are dependent on others for support.

The increase in the number of people in the world who are under 15 years of age is a major challenge for the world. It is a challenge that will require a number of solutions, including improvements in medical care, better nutrition, and a decline in the number of people who are dying from infectious diseases.

It is also a challenge that will require a number of solutions, including a decline in the number of people who are having abortions, a decline in the number of people who are using contraception, and a decline in the number of people who are dying from infectious diseases.
